

WASTE WATER TREATMENT

Arwadh has developed an exclusive relationship with Aqua-Aerobic Systems, Inc., to bring over 40 years of wastewater treatment and reuse expertise to the Arab World. Our wastewater treatment systems offer industry-leading engineering and manufacturing of secondary and tertiary applications for federal, municipal and industrial markets worldwide. Our dedication to research, environmental protection and product integrity ensures the availability of quality products designed to meet unique applications and changing requirements. Solutions include aeration and mixing, biological processes, cloth filter systems and multi-barrier systems with membrane-quality effluent, all geared at treating virtually any wastewater type and effluent requirement.

Choose Arwadh to work with you to meet the water challenges of today. With installations throughout the Middle East our proven technologies now offer local support for sales, service and installation to ensure the successful implementation of your wastewater project.

How are you treating your wastewater?

We can retrofit an existing plant to make it more efficient, or design a custom system to meet your exact requirements. Tell us the results you wish to achieve and our engineering team will handle the rest.

How clean is your effluent?

As a plant manager, you strive to produce an effluent with a high enough quality to reuse. Effluent with this kind of quality is valuable, and the reason why customers turn to us for their wastewater treatment or water reuse needs.

Is your plant energy efficient and low maintenance?

Our wastewater treatment systems boast some of the lowest energy consumption rates in the market. Reduced energy needs for mixing, pumping, and aeration lead to a lower life cycle cost, saving your plant money in the long term.
